[1]1MB = 1 million bytes, 1 GB = 1 billion bytes, and 1T B = 1 trillion bytes. Actual user capacity may be less depending on operating environment. [2]This drive is in compliance with the European Union Directive 2011/65/EU and Directive (EU) 2015/863 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. [3]Single stream at 3.2 Mbps (1080p, H.265, 25 fps). Results may vary depending on camera resolution, file format, frames per second, software, system settings, video quality, and other factors. [4]Gigabit per second (Gb/s) = one billion bits per second. Effective maximum SATA 6 Gb/s transfer rate calculated according to the Serial ATA specification published by the SATA-IO organization as of the date of this specification sheet. Visit www.sata-io.org for details. [5]1 MB/s = 1 million bytes per second. Based on internal testing; performance may vary depending upon host device, usage conditions, drive capacity, and other factors. [6]Controlled unload at ambient condition. [7]Workload Rate is defined as the amount of user data transferred to or from the hard drive. Workload Rate is annualized (TB transferred x (8760/recorded power-on hours)). Workload Rate will vary depending on your hardware and software components and configurations. [8]MTBF specifications are based on a sample population and are estimated by statistical measurements and acceleration algorithms under typical operating conditions: workload of 90 TB/year and drive temperature of 40 °C. Derating of MTBF will occur above these parameters, up to 65 °C drive temperature. MTBF does not predict an individual drive's reliability and does not constitute a warranty. [9]See http://support.wdc.com/warranty for regional specific warranty details. [10]Power measurements at room-ambient temperature.
